E. RATIONALE FOR FINAL STRATEGY DETERMINATION The San Angelo Gas Company is on 2.4 acres, site about half through a historical search of town gas production facilities. Prior to 1929, this site was used to produce "town-gas" which was used as fuel for illuminating street lamps; it was common practice during this time period to dispose of the coal tar by-products from the production of town-gas into unlined on-site disposal pits. However, an on-site investigation by the TCEQ superfund unit showed that the site is completely covered by a paved parking lot and an AT&T office building. Because there were no obvious signs of contamination found, there was no historical or visual evidence of onsite disposal pits, and no pits were found during the construction of the facility structures, no further investigation is necessary.
